Global Overview

United States:

The US stock market ended today's session with positive results among its main indices. Of note are the Dow Jones Industrial Average that closed positive for the fourth consecutive day and the Nasdaq Composite Index that set its 46th historical high of 2017. On the other hand, the latest US employment report indicated that 156,000 new jobs were created in August, below the estimate of 170,000, while the unemployment rate rose to 4.4% from the previous 4.3% and, moreover, there was no growth in wages. This has positively affected gold, which increased by 0.61%, because it can be interpreted as giving the reason for the Fed to delay possible increases in interest rates in 2017. Likewise, this affected negatively the prices of the 10-year Treasury bonds, thus increasing their yields. Analysts suggest that traders took advantage of the initial price increase on the day to get rid of their government bond positions. In energy news, gallon gasoline prices continued to rise to an average of \$ 2.535 per gallon in the wake of Hurricane Harvey, which triggered the shutdown of several refineries, leading to shortages of fuel supplies. Finally, the US dollar rebounded strongly against the euro after a report that the European Central Bank may not have a plan to reduce the monetary stimulus until December.

Europe:

The European stock market closed with positive results among its main indices. European shares' gains were driven by a report by the European Central Bank, which said it would wait until December to reveal a plan to cut its asset purchases. The Stoxx 600 European benchmark would have a 0.6% increase in the week, but continued to fall 1.1% in August, marking its third consecutive month of losses. Regarding the ECB, Bloomberg reported that the European Central Bank is not yet ready to announce plans to change its bond purchase scheme for 60 billion euros per month. Analysts had expected the central bank to reveal the future relief program at the September monetary policy meeting next week. But policymakers could wait until December to make their decision, a few weeks before the current program expires, according to the report. Craig Erlam, an Oanda market analyst, said in a note, "It looks like the central bank is paying too much attention to its currency exchange rate and now it may even be planning its declining listing around it, or at least using it as a tool to hold the coin". The ECB has also recently expressed concern that the euro has risen so fast, fearing it will hurt European exports. Regarding currencies, the euro fell to today, due to disappointing employment data shown for the month of August in the United States, while the pound gained trading at \$ 1.2973.

Asia:

The Asian stock market ended today's session with positive results among its main indexes, thus having a good start in September, as the reading of a private indicator of activity of Chinese factories, the Purchasing Managers Index of manufacturing of Caixin, reached 51.6, being this its third consecutive time in August and being its second highest level this year. This provoked, according to some strategists, that the investors' sentiment towards China to be positive. As a result, the Shenzhen and Shanghai Composite benchmark indices had increases of 0.6% and 0.2%, respectively. Referring to the rest of Asia, because the solid earnings season ended, the markets were unchanged in the absence of this potential catalyst. Exceptions were the markets of South Korea and Hong Kong, which had declines in the indices Kospi (-0.2%) and Hang Seng (-0.1%), respectively. Additionally, markets in the Philippines, Singapore, Malaysia and Indonesia did not open today for a holiday. On the other hand, today the monthly report of jobs of the United States is published. Investors will pay attention to this information, as some analysts say better-than-expected figures could cause the dollar to reverse its past declines.
