### **Global Overview**

#### **United States:**

The US stock market ended today with negative results among its main indices. These were driven mainly by the decline of the financial sector, especially with respect to regional banks which fell by -2.83%. The large financial institutions were not immune to this drop, highlighting the decline of Wells Fargo & Co. -2.17% and that of 1.P. Morgan Chase & Co. at -2.14%. Also, the actions were negatively affected due to continuing doubts about the tax law project schedule of the Republican Party, as well as the possible changes that can be made to have a greater chance of early approval. In commodities news, gold futures prices fell back on the day as the US dollar advanced against most of its trivals, reversing the course taken in the previous session, making gold less attractive to investors who use another currency. On the other hand, oil prices fell from the highs in more than two years reached the previous day by the situation in Saudi Arabia, which arrested several government officials and members of the royal family on corruption charges.

#### Europe:

The European stock market closed with negative results among its main indices. The "blue-chip" English shares closed with the title "Blueprints". Retail sales only grew + 0.2% in October, the slowest growth rate since May, according to figures from the British Retail Consortium and KPMG. KPMG's retail sales chief said in a statement, "October marked another reversal of fortunes for retailers, which reinforces how volatile consumer spending has been." On the other hand, energy stocks benefited after oil prices traded around their two-year highs. The oil company BP PIC won close to + 0.07% after this news. Regarding economic data, housing prices in the United Kingdom grew 4.5% annually in October, the highest rate since January, according to a Halifax report published on Tuesday. "The fact that the supply of new and existing housing available for sale remains low, combined with historically low mortgage rates and a high employment rate, continues to support housing prices and is likely to do so in the coming months. "said Russell Galley, CEO of Halifax Community Bank, in a statement.

#### Asia:

The Asian stock market ended today's session with positive results among its main indices. This was due to the fact that, according to some traders, investors have found themselves with a continuous seasonal environment of solid earnings and low interest rates, which has caused a climate where economic conditions are seen as neither too strong nor too weak to justify political efforts to prevent the activity of a potential overheating. As a result, from what has happened on this day, there have been recent capital inflows to Japan, causing its Niklel 225 benchmark index to increase by 1.7%, reaching its peak of 1996. Regarding Australia, the benchmark index \$8a7/ASX 200 exceeded its 2015 maximum, growing by more than 1%, helped by the improvement in commodity prices. Meanwhile, in China, the mining sector was boosted by a further bounce in Chinese iron ore prices. In addition, in Singapore, stocks (which are also influenced by the price of commodity had strong gains, helping the country's Straits Times index increase by 0.9%. On the other hand, overnight oil prices in the United States provided benefits for energy companies such as Inpex and Japan Petroleum (+4%, each).
