Global Overview

United States:

The US stock market ended the session with negative results, previously to the much anticipated tax bill, which the Republican party plans to deliver to the president for his signature. In more detail, the tax bill, which cuts corporate rates, expects to be approved before Christmas, driving the main indices. In addition, the House of Representatives is expected to vote on the final version on Tuesday, while the Senate vote is on Tuesday or Wednesday. That should be enough time for the bill to arrive at President Donald Trump's desk for the final signature before Christmas, which is the self-imposed deadline by the Republican party. In economic news, housing indicators began to rise, because builders' confidence has soared as tax reform efforts began to crystallize, according to an industry report released on Monday. Finally, the yield on 10-year Treasury bonds rose +3.08%, marking the highest level since October 27, this happened after housing data helped strengthen the outlook for the US economy.

Europe:

The European stock market ended the day with negative results among its main indices. The stocks of the FTSE 100 index of the United Kingdom stand out, which closed positively in what continues the optimism about the possible reduction of taxes in the United States, after two senators who initially opposed the fiscal reform promised their support to the bill. The sectors of the index that grew the most were those of public services and consumption; on the other hand, the sectors that had the worst performance were health care and technology. Likewise, although the shares of the index grew during the day, they did not achieve stronger gains across Europe, due to the strengthening of the pound sterling against the US dollar and other rivals. The latter reduces the profits of the exporting companies by receiving less pounds for each dollar of export earnings. On the other hand, in news about Germany, investors kept evaluating the German ifo business climate index, which is seen as the leading indicator of the economic activity of Europe's largest economy, after it went back to 117.2 in December, below November 117.6 and falling the forecasts of 117.6 that were available for reading this month.

Asia:

The Asian stock market ended today's session with positive results among its main indices. This was basically because the changes in the US tax code came to an end. This benefited the Australian market, whose S&P/ASX 200 index increased by 0.6%, reaching record levels in 10 years. This benefit was also explained, despite small movements in oil prices, due to the 1% increase in shares of companies related to mining and oil. In Japan, the Nikkei 225 stock index increased by 0.04%. This may be due to the fact that the Bank of Japan will start a two-day meeting on Wednesday, so there is an optimistic expectation on the issues that are going to be addressed. Regarding South Korea, the Kospi benchmark fell 0.2%, despite the 1.1% increase in the South Korean technology giant Samsung Electronics Co. On the other hand, in the other markets of the region, in Hong Kong, the Hang Seng index returned to positive territory in the month of December and increased 0.7%. Additionally, similar gains were recorded in the shares of mainland China and the New Zealand index closed with another record high.
