### Abstract

[View references \(41\)](#)

Historic buildings that comprise the cultural heritage of humanity are in need of preservation on a worldwide scale in regard to degradation resultant from atmospheric pollutants. The Brazilian Public Market, located in the historic center of the mega city of São Paulo, is the object of this research, due to its representation of historical Brazilian architecture. The general objective of this manuscript is to analyze the influence of air pollutants on the degradation of the historic São Paulo Public Market in the city of São Paulo, Brazil. Methodologically, between May 2018 and April 2019, samples of sedimented dust were collected at five points on the side walls of the market's historic structure, for the analysis of accumulated ultrafine particles (UFPs) and nanoparticles (NPs). A total of 20 samples of particulate matter were collected using self-made passive samplers (SMPs). Using SMPs, 12 months of accumulation and deposition were used to sample the atmospheric PM<sub>1</sub>. The results demonstrate the presence of dangerous elements such as: As, Cd, Cr, Pb, Zn. Note that EDS coupled with microscopy techniques, points out the risks to human health, due to the presence of these dangerous elements that accumulate in the building's structure. The results show that 85% of the NPs sampled contained Pb, and 56% contained Pb and Ti, which are harmful to both historic buildings and human health. Air pollution enables the further deterioration of the São Paulo Public Market, which is in need of restoration. © 2021 Elsevier Ltd

## Funding text

The authors gratefully acknowledge the NOAA Air Resources Laboratory ( ARL ) for the provision of the HYSPLIT transport and dispersion model and/or READY website ( <http://www.ready.noaa.gov> ) used in this publication. We also wish to thank the Center for Studies and Research on Urban Mobility (NEPMOUR/IMED). Scientific Research Institute (Instituto de Investigación Científica, IDIC) of the University of Lima and Air Centre for supporting this research. National Council for Scientific and Technological Development (CNPq) for the research productivity ball in Brazil. All persons who have made substantial contributions to the work reported in the manuscript (e.g., technical help, writing and editing assistance, general support), but who do not meet the criteria for authorship, are named in the Acknowledgements.
